

# ELECTRONIC DATA DISCOVERY

UHY Advisors' eDiscovery process is designed to improve the overall quality of electronic evidence. Using forensically sound methods, UHY Advisors locates and optimizes targeted, lost and hidden data, eliminates redundant information, correctly formats evidence for viewing, and prepares documents for review. Throughout the process, UHY Advisors maintains a secure and documented chain of custody and thoroughly secures the evidence from outside access via a closed, high-speed network. UHY Advisors also offers expert testimony to ensure the legitimacy and authenticity of all digital forensic activities.

**37.5**  
million printed pages.

**Can you find the document you need?**

**Do you even know where to start?**

## UHY Advisors' eDiscovery & Digital Forensics Practice

The growing relevance of electronic communication and document creation is having a significant impact on investigation and litigation activities. Attorneys are finding it increasingly difficult to identify, discover, and recover relevant data from the overwhelming amount of information stored electronically. A single gigabyte of hard drive space is equivalent to 75,000 printed pages, and many computers contain as much as 500 gigabytes of storage space. In other words, one computer can house up to 37.5 million printed pages of information. Considering most cases involve dozens, if not hundreds of computers, the search for evidence is not only ineffective, but also time consuming and costly.

UHY Advisors' eDiscovery professionals make all those numbers a little less overwhelming. Our cost-effective electronic data discovery process increases the quality, efficiency and value of digital forensics.

## About UHY Advisors

UHY Advisors is ranked as one of the nation's 15 largest professional services firms. With offices across the U.S. and access to extensive global resources, UHY Advisors is the chosen consultant for corporations and law firms because of our eDiscovery and Forensic, Litigation & Valuation services. Our staff is comprised of the industry's most respected electronic data personnel, investigators and former law enforcement professionals. This unmatched expertise combined with our proven, methodical, forensically sound processes ensures the quality and usability of your digital data and electronic evidence.
